

ASSIGNMENT-1

RAMBHA SATVIK - EE22BTECH11043*

Question : Suppose the equations AB , BC and CA are respectively given by

$$\mathbf{n}_i^T \mathbf{x} = c_i \quad i = 1, 2, 3 \quad (1)$$

The equations of the respective angle bisectors are given by

$$\frac{\mathbf{n}_i^T \mathbf{x} - c_i}{\|\mathbf{n}_i\|} = \pm \frac{\mathbf{n}_j^T \mathbf{x} - c_j}{\|\mathbf{n}_j\|} \quad i \neq j \quad (2)$$

Substitute numerical values and find the equations of the angle bisectors of A, B and C .

Solution :

The parametric equations of sides;

$$BC, \text{ is } (11 \ 1)\mathbf{x} = -38, \quad (3)$$

$$CA, \text{ is } (1 \ -1)\mathbf{x} = 2, \quad (4)$$

$$AB, \text{ is } (7 \ 5)\mathbf{x} = 2 \quad (5)$$

(6)

Using the formula mentioned in the question to find out the angular bisector for sides AB and AC , naming the angular bisector L we get,

$$\frac{\mathbf{n}_3^T \mathbf{x} - c_3}{\|\mathbf{n}_3\|} = \pm \frac{\mathbf{n}_2^T \mathbf{x} - c_2}{\|\mathbf{n}_2\|} \quad (7)$$

As we can see we'll get 2 solutions for L . This is because one of them is internal angular bisector and the other is the external angular bisector. Internal angular bisector can be evaluated if we take "+" in the above formula.

Fig. 0. Triangle generated using python

Hence, L is given by,

$$\frac{\mathbf{n}_3^T \mathbf{x} - c_3}{\|\mathbf{n}_3\|} = \frac{\mathbf{n}_2^T \mathbf{x} - c_2}{\|\mathbf{n}_2\|} \quad (8)$$

$$\left(\frac{\mathbf{n}_3}{\|\mathbf{n}_3\|} - \frac{\mathbf{n}_2}{\|\mathbf{n}_2\|} \right) \mathbf{x} = \left(\frac{c_3}{\|\mathbf{n}_3\|} - \frac{c_2}{\|\mathbf{n}_2\|} \right) \quad (9)$$

$$\left(\frac{(7 \ 5)}{\sqrt{74}} - \frac{(1 \ -1)}{\sqrt{2}} \right) \mathbf{x} = \frac{2}{\sqrt{74}} - \frac{2}{\sqrt{2}} \quad (10)$$

$$\left(\frac{7-\sqrt{37}}{\sqrt{74}} \ \frac{5+\sqrt{37}}{\sqrt{74}} \right) \mathbf{x} = \frac{2-2\sqrt{37}}{\sqrt{74}} \quad (11)$$

Hence, the internal angular bisector of angle A , L will be,

$$\left(\frac{7-\sqrt{37}}{\sqrt{74}} \ \frac{5+\sqrt{37}}{\sqrt{74}} \right) \mathbf{x} = \frac{2-2\sqrt{37}}{\sqrt{74}} \quad (12)$$
