Rambha Satvik*

The probability distribution of a random variable X is given below:

X	0	1	2	3
P(X)	k	$\frac{k}{2}$	$\frac{k}{4}$	$\frac{k}{8}$

- 1) Determine the value of k.
- 2) Determine $P(X \le 2)$ and P(X > 2).
- 3) Find $P(X \le 2) + P(X > 2)$.

Solution:

1) **Value of** *k*: The cumulative distribution function of X is,

$$F_X(k) = \Pr\left(X \le k\right) \tag{1}$$

$$=\sum_{i=0}^{k}p_X(i) \tag{2}$$

As X can only take values to 3, we can say that,

$$F_X(k \ge 3) = 1$$
 (3)

$$\sum_{k=0}^{k} p_X(k) = 1 \quad (4)$$

$$\implies p_X(0) + p_X(1) + p_X(2) + p_X(3) = 1$$
 (5)

$$\implies k + \frac{k}{2} + \frac{k}{4} + \frac{k}{8} = 1 \quad (6)$$

$$\implies \frac{15k}{8} = 1 \quad (7)$$

$$\implies k = \frac{8}{15} \tag{8}$$

Hence, the value of k is $\frac{8}{15}$. This makes the data given in the question as follows,

$$p_X(k) = \begin{cases} \frac{8}{15} & \text{if } k = 0\\ \frac{4}{15} & \text{if } k = 1\\ \frac{2}{15} & \text{if } k = 2\\ \frac{1}{15} & \text{if } k = 3\\ 0 & \text{Otherwise} \end{cases}$$
(9)

Using the value of k we can also find CDF of X,

$$F_X(k) = \begin{cases} 0 & \text{if } k < 0\\ \frac{8}{15} & \text{if } k = 0\\ \frac{4}{5} & \text{if } k = 1\\ \frac{14}{15} & \text{if } k = 2\\ 1 & \text{if } k \ge 3 \end{cases}$$
(10)

- 2) Value of $P(X \le 2)$ and P(X > 2):
 - a) Value of $P(X \le 2)$:

$$\Pr(X \le 2) = F_X(2)$$
 (11)

$$=\frac{14}{15}$$
 (12)

b) Value of P(X > 2):

$$\Pr(X > 2) = 1 - F_X(2) \tag{13}$$

$$=1-\frac{14}{15}$$
 (14)

$$=\frac{1}{15}\tag{15}$$

3) **Value of** $P(X \le 2) + P(X > 2)$:

$$\Pr(X \le 2) + \Pr(X > 2) = F_X(2) + 1 - F_X(2)$$
(16)

$$= 1 \tag{17}$$
